

AEROQUAL CLOUD / CONNECT

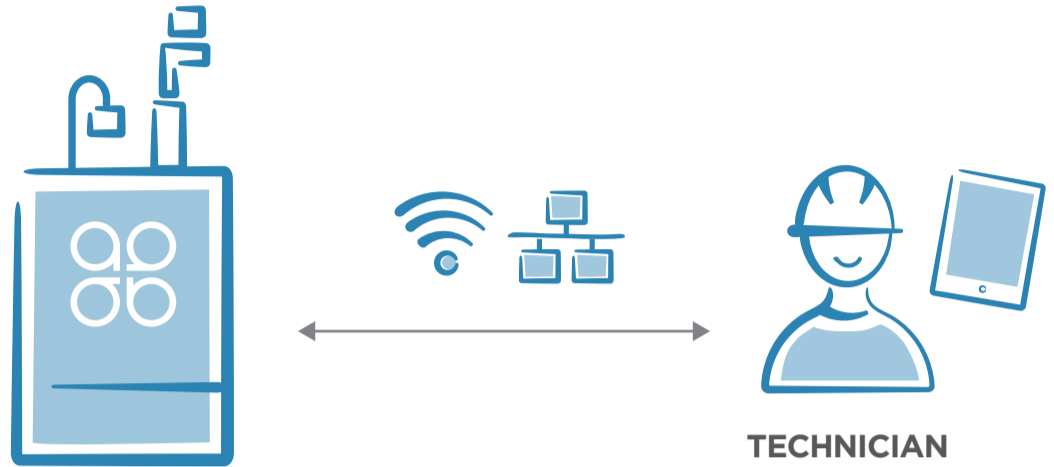

How it works

AEROQUAL CONNECT

In the field

When setting up or servicing the instrument, users create a 1-1 connection using WIFI or Ethernet.

Users open a browser on their phone, tablet, or laptop and interface with the instrument using Aeroqual Connect software which is installed on the instrument's embedded PC.

AEROQUAL CLOUD

Working remotely

When working remotely, multiple users can access instrument data and manage settings via Aeroqual Cloud.

This is software hosted on secure third party servers, which you access through the browser on your phone, tablet, or computer.

Aeroqual Cloud gives authorized users access to a single instrument or a whole network of instruments.
